

7-Stage City Water Filtration System + Salt-Free Water Conditioner (Softener Alternative)

The 7-Stage City Water Filtration System + Salt-Free Water Conditioner is a powerful, dual-tank system designed to remove city water contaminants while providing a salt-free alternative to traditional water softening. This system effectively reduces chlorine, chloramines, heavy metals, PFAs, VOCs, and pharmaceuticals while utilizing advanced NAC (Nuclear Assisted Crystallization) technology to prevent limescale buildup without the use of salt.

By combining an up flow filtration process, a **salt-free softener alternative**, and a final-stage polishing filter, this system delivers cleaner, safer water while protecting your pipes, appliances, and fixtures from scale buildup. With no salt, no electricity, and no wastewater, it is an eco-friendly and low-maintenance solution for superior water quality.

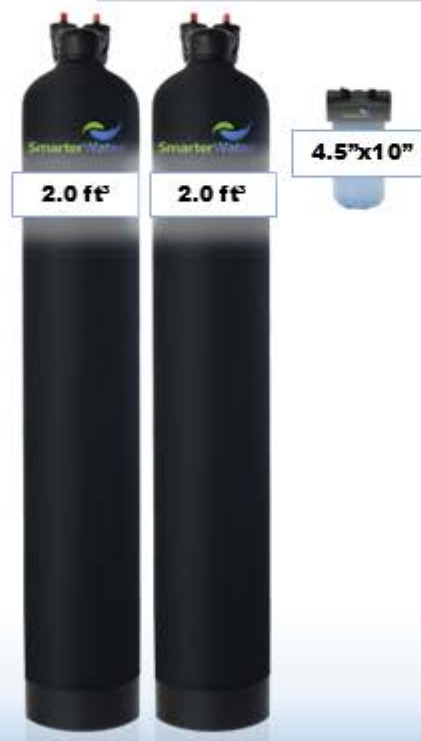

What the MAX Series Is Good For:

✓ Ideal for homes on city water looking to eliminate hard water, improve taste, and remove harmful contaminants like chlorine, PFOS, VOCs, and pharmaceuticals — all in one high-performance system in a salt-free, environmentally friendly package.

1-3 Bathrooms
Model: SWMAX715

4-6 Bathrooms
Model: SWMAX720

7-Stage Treatment Process:

Stage 1 – Up flow Filtration Design

Forces water upward through the filter bed, preventing channeling and ensuring maximum contact time with filtration media for improved contaminant removal.

Stage 2 – Garnet Mineral Stone Filtration

Traps suspended solids and sediment, improving water clarity and protecting downstream filtration stages.

Stage 3 – KDF 55 Media

A high-purity copper-zinc filtration media that removes chlorine, microorganisms, and heavy metals, improving water quality and extending carbon filter life.

Stage 4 – KDF 85 Media

Targets chloramines, heavy metals, and alloys, providing additional contaminant reduction for healthier, better-tasting water.

Stage 5 – Hi-Activity Catalytic Coconut Carbon

Removes PFAs, VOCs (volatile organic compounds), and pharmaceuticals, ensuring safer, purer water free from chemical contaminants.

Stage 6 – NAC (Nuclear Assisted Crystallization) Water Conditioner

A salt-free softener alternative that prevents limescale and calcium buildup by transforming hardness minerals into inactive microcrystals, protecting your plumbing and appliances without the need for salt or regeneration cycles.

Stage 7 – Post 5-Micron Polishing Filter

Final-stage filtration removes fine particulates and residual contaminants, ensuring crystal-clear water at every tap.
