

7-Stage Combo (City Water) Super Softener System (Salt-Based) – Higher Performance Filtration

The 7-Stage City Water Filtration & Softening System (Salt-Based) is an advanced, dual-tank system designed to tackle chlorine, chloramines, heavy metals, PFAs, VOCs, pharmaceuticals, and hard water minerals. By utilizing a downflow filtration process, a secondary backflushing control valve, and a final-stage polishing filter, this system ensures clean, safe, and luxuriously soft water throughout your home.

Engineered to prevent channeling, maximize filtration efficiency, and extend the lifespan of filtration media, this system is the ultimate solution for city water treatment, removing harmful contaminants and preventing limescale buildup in plumbing and appliances.

What the MX Series Is Good For:

✓ Ideal for homes on city water looking to eliminate hard water, improve taste, and remove harmful contaminants like chlorine, PFOS, VOCs, and pharmaceuticals — all in one high-performance system.

1-3 Bathrooms
Model: SWMX715

4-6 Bathrooms
Model: SWMX720

7-Stage Treatment Process:

Stage 1 – Downflow Filtration Design

Forces water upward through the filter bed, preventing channeling and ensuring maximum contact time with filtration media for improved contaminant removal.

Stage 2 – Garnet Mineral Stone Filtration

Traps suspended solids and sediment, improving water clarity and protecting downstream filtration stages.

Stage 3 – KDF 55 Media

A high-purity copper-zinc filtration media that removes chlorine, microorganisms, and heavy metals, improving water quality and extending carbon filter life.

Stage 4 – KDF 85 Media

Targets chloramines, heavy metals, and alloys, providing additional contaminant reduction for healthier, better-tasting water.

Stage 5 – Hi-Activity Catalytic Coconut Carbon

Removes PFAs, VOCs (volatile organic compounds), and pharmaceuticals, ensuring safer, purer water free from chemical contaminants.

Stage 6 – SmartSOFT™ Resin Bed

A salt-based softening resin that removes calcium and magnesium, preventing hard water buildup in pipes, faucets, and appliances.

Stage 7 – Post 5-Micron Polishing Filter

Final-stage filtration removes fine particulates and residual contaminants, ensuring crystal-clear water at every tap.
